# SeamlessMD

Job Opening: Software Engineer

Us:

We are a health technology company that is reshaping the way hospitals care for patients. With over $27 billion dollars spent on hospital readmissions each year in North America, we know there is a better way.

We help hospitals drive better patient engagement after surgery through interactive recovery modules on a patient's smart phone, tablet or the web. We provide this patient-generated data back to health care providers in beautiful and insightful ways, allowing health care providers to deliver better remote assessments and perform advanced analytics to drive quality improvement in their organizations.

We are already working with leading hospitals in Canada and the U.S., which means your efforts directly contribute to improving the lives of patients everywhere.

We are funded by some of Canada's most prominent executives, investors and digital health entrepreneurs, and have been named a Forbes 30 Under 30 in Healthcare and one of the Top 20 Hottest Innovation Companies in Canada.

Our main office is at MaRS, Canada's leading ecosystem for healthcare, science and technology. You will find yourself immersed in a culture that is fun and relaxed, but passionate about startups, healthcare and building something great. We offer flexible work hours, a competitive salary, stock options and the opportunity to make a significant impact on the health care system.

You:

- Are a well-rounded software engineer with a passion for building a better world.
- Have built products that have been delivered to clients or published online/in the app store.
- Have an excellent understanding of building robust and mission critical software that will be used in an enterprise setting
- Enjoy working in a fast paced environment with potentially changing requirements
- Are self-motivated and able to work independently

At SeamlessMD, you will:

- Develop mission critical features based off user requirements from clients for an innovative platform that is implemented in hospitals and will have a direct impact on patient care
- Design and implement product requirements on both the backend and mobile client in a dynamic and creative setting.
- Produce high quality and well documented code
- Communicate completed work effectively to rest of the team
- Be immersed in an exciting startup culture, interface with medical professionals, and share our vision in creating a better healthcare system for everyone

Qualifications

Skills that will be an asset to have, but you can learn on the job:

- Ruby on Rails (or other MVC frameworks)
- Javascript
- Mobile app development (iOS, Android, Titanium SDK)
- Web services (REST)
- Github
- Agile development methodologies

Important nontechnical skills to have:

- Strong sense of purpose
- Experience or interest in health care
- Relentless pursuit of success
- A clean criminal check

Time commitment

- Full-time

Apply

If you are ready to join us and build the future of health care, please email a one-page cover letter and your resume to careers@seamless.md.
