

# SeamlessMD

**Job Title:** Senior Software Engineer (Ruby on Rails) - Full time  
**Location:** Toronto, ON, Canada

**Are you passionate about improving the healthcare system?**

**Are you driven to bring healthcare into the 21st century with innovative, patient-centered technology?**

**Are you excited to help health systems pioneer digital care, especially to tackle COVID-19?**

If your answer is “Yes!” to the above, we may be the perfect fit for each other!

**At SeamlessMD, our mission is  
“to ensure every patient gets the right care at the right time”**

**Who is SeamlessMD?** Founded in 2012, we are a diverse team of healthcare providers, technologists and industry folks passionate about improving patient care. We have been named by OMERS as a Top 100 Canadian Health Tech Company, a Global Top 100 Company in Digital Health and a Branham300 as Top 25 Up and Coming ICT Company in Canada. We are alumni of both the Creative Destruction Lab and Next 36 business incubators.

**What is SeamlessMD?** Most healthcare is still delivered through paper and verbal instructions, with no easy way for providers to monitor patients and catch problems sooner. Staying connected with patients virtually is even more important during COVID-19. To address this, SeamlessMD provides the #1 digital patient engagement platform for hospitals and health systems to engage, monitor and stay connected with patients across their health care journey (e.g. surgery, chronic care, etc.). Patients are guided on smartphones, tablets and computers from preparation through recovery with reminders, education and progress tracking. Healthcare providers receive alerts, monitor patients on dashboards and access analytics to deliver better care. SeamlessMD is also integrated with Epic and Cerner - the two largest Electronic Health Record systems.

**Who are our customers?** Leading hospitals & health systems such as Sunnybrook, The Ottawa Hospital, Stanford Health Care and Rush University Medical Center use SeamlessMD as

# SeamlessMD

part of their digital patient engagement strategies to elevate the patient experience, improve health outcomes and lower costs.

**Why does SeamlessMD matter?** Patients report feeling less anxiety, being more prepared for their healthcare journey and being more confident during recovery. 15+ studies by academic hospitals have shown SeamlessMD to reduce recovery times (hospital length of stay) by 1-2 days, hospital readmissions by up to 72% and ER visits by up to 47%. This means patients are healthier and the healthcare system is more efficient!

**In order to make SeamlessMD available to patients and providers everywhere, we are growing our amazing team. Here's where you come in...**

**We're looking for a Senior Software Engineer to join our team**

**You:**

- Are a well-rounded software engineer with a passion for building a better patient and healthcare provider experience.
- Have built products that have been delivered to clients or published online/in the app store.
- Have an excellent understanding of building robust and mission critical software that will be used in an enterprise setting
- Enjoy working in a fast paced environment with potentially changing requirements
- Are self-motivated and able to work independently

**At SeamlessMD, you will:**

- Develop mission critical features based off user requirements from clients for an innovative platform that is implemented in hospitals and will have a direct impact on patient care
- Design and implement product requirements on both the backend and mobile client in a dynamic and creative setting.
- Produce high quality and well documented code
- Communicate completed work effectively to rest of the team
- Be immersed in an exciting startup culture, interface with medical professionals, and share our vision in creating a better healthcare system for everyone

**Qualifications**

- 3+ years experience in tech product environment
- 3+ years of experience with Ruby on Rails
- Javascript (React)
- MySQL/Memcache/Redis
- Web services (REST)

# SeamlessMD

- Github (or equivalent version control system)
- Agile development methodologies
- Bachelors in computer science/computer engineering or equivalent experience
- Experience working in a start-up is an asset

## **Important non-technical skills to have:**

- Strong sense of purpose
- Experience or interest in health care
- Experience or interest in security
- Able to work independently and as a team
- Relentless pursuit of success
- A clean criminal check

## **Deadline**

August 30, 2020

## **Apply**
